NOAA Fisheries Passive Acoustic Data- GCP Workflow

PAM Deployment Metadata SmartSheet

- Utilizing NEFSC developed Makara database
 - SCs upload planned & completed metadata to Makara, populating SmartSheet
- Automatic notifications to Navy when metadata entered for:
 - Planned
 - Updated
 - Completed deployments

Fields marked with an asterisk (*) are required.

Science Center

NOAA Fisheries Passive Acoustic Data- GCP Workflow

Next Steps:

- **Cloud based data transfer:** Work with NOAA OCIO to implement appropriate IL5 security controls as outlined in the “Cloud Service Provider (CSP) Security Requirements Guide (SRG)- Appendix D, and per further Navy guidance. Get Navy Approval.
- **PAM Deployment Reporting:** Makara metadata database will be demo'd to broader NMFS community in September & October. Following this, with a streamlined cloud-based screening process in place, SCs can begin updating PAM deployments since 2024 reporting.
- **NMFS/Navy Annex Renewal:** Ongoing discussions on renewing Annex on PAM data handling. Numerous specific points we're working through (e.g. timelines, data access prior to clearance, fate of unredacted datasets....)

NMFS/Navy Agreement as it is shaping up

- We remove any limitations on our reporting to Navy. No 'sensitive area' limitations.
 - **Intent here is reporting on ALL PAM deployments**
 - Pre-notification?--30 day heads up doable? At least as intent?
 - Post-recovery
- NMFS access to Navy Asset data
- **Fate of original, raw datasets-** Need your feedback here!
 - Delete raw data from local hard drives once uploaded to GCP?
 - If hard drives to be retained, will need to be held securely with Navy designated controls
- **Authorized Project Partners**—Navy likely to want limitations
- **Work we carry out vs. PAM we fund**
- **Interim Time Frames/Transition Period**

NMFS/Navy Agreement as it is shaping up

- **Limited Access Bucket—**
 - NMFS Prioritization (e.g. for more urgent access)
 - Who needs access? Varies based on length of time ? (3, 6 months, 1 yr)??
 - How use it?— 1) None, 2) in GCP, Download (would then require facility controls)
 - Ideally what would we like vs what can we accept?
- **At sea controls**
 - Onerous- can not do with 40+% of datasets
 - Potentially Sensitive Label only upon completion might remove need for these
- **Other thoughts/requests/needs?**
 - Ability to audit redactions???
 - Resources? Navy is open to it
 - Anything else you want from Navy?
- **Start getting datasets post 2024 reporting in Makara!!**
